

JVR_N_K

Application					
Varistors are used as voltage-dependent resistors (VDR's) to protect electronic devices. They safely and reliably protect against overload build-up and protect valuable equipment from power surge damage. Surge voltages are absorbed in the varistor.					
Selection Criteria					
<ul style="list-style-type: none"> • The maximum operating voltage must be lower than the varistor voltage • The capacity of the varistor (energy absorption) should match the energy content of the varistor 					
Technical Specifications					
Material:			Zinc Oxide (ZnO)		
Storage Temperature:			-40...+125°C		
Operating Temperature, Max.:			+85°C		
Working Surface Temperature, Max.:			+115°C		
Response Time, Max.:			25ns		
Voltage/Temperature Coefficient:			-0,05%/°C		
Insulation Resistance 500V:			>1000MW		
Part Nr.	U_{RMS}	U_{RMS}	U_V	DU_V	U_S
JVR_N_	[V~]	[V=]	[V]	[%]	[V]
101K	60	85	100	±10	175
180K	11	14	18	±10	40
390K	25	31	39	±10	77
391K	250	320	390	±10	650
U_{RMS} = Max. Operating Voltage , U_V = Varistor Voltage at 1 mA, DU_V = Tolerance of Varistor Voltage, U_S = Clamping Voltage					
Part Nr.	$I_{Max.}$	$I_{Max.}$	P_{Rated}	E	T
	1 Impulse	2 Impulse			
	[A]	[A]	[W]	[J]	[mm]
JVR05N180K	100	50	0,01	0,6	4,5
