# Differential LVPECL to LVTTL Translator

The MC100EPT21 is a Differential LVPECL to LVTTL translator. Because LVPECL (Positive ECL) levels are used only +3.3V and ground are required. The small outline 8–lead SOIC package makes the EPT21 ideal for applications which require the translation of a clock or data signal.

The VBB output allows the EPT21 to also be used in a single–ended input mode. In this mode the VBB output is tied to the  $\overline{D0}$  input for a non–inverting buffer or the D0 input for an inverting buffer. If used, the VBB pin should be bypassed to ground via a 0.01µF capacitator.

- 1.4ns Typical Propagation Delay
- 275MHz Fmax (Clock bit stream, not pseudo-random)
- Differential LVPECL inputs
- Small Outline SOIC Package
- 24mA TTL outputs
- Flow Through Pinouts
- Internal Input Resistors: Pulldown on D, Pulldown and Pullup on  $\overline{D}$
- Q Output will default LOW with inputs open or at GND
- ESD Protection: >1500V HBM, >100V MM
- VBB Output
- New Differential Input Common Mode Range
- Moisture Sensitivity Level 1, Indefinite Time Out of Drypack. For Additional Information, See Application Note AND8003/D
- Flammability Rating: UL–94 code V–0 @ 1/8", Oxygen Index 28 to 34
- Transistor Count = 81 devices
